

FERAL GLOSS EMPIRE LEVEL ZERO CUSTOMIZATION ENGINE

PUBLISHING STUDIO CONSTITUTION ALIGNMENT

This is a collectible production asset. It compounds value by enforcing perfect identity lock from the first millimeter.

THE THREE-AXIS ARCHITECTURE

The three-axis system is the single legal intake format for all FGE character builds. It is collectible, auditable, and canon-compliant by design.

FACE MODULE — 16 LOCKED FEATURES

All measurements reconciled to millimeters. This is the smaller module but carries the highest identity weight.

BODY MODULE — 16 LOCKED FEATURES

Anthropometric + aesthetic sliders. This is the bigger module. All values taken from nude or near-nude reference imagery.

This 16-feature body list is now the permanent root layer. It will be used identically for every Level Zero build going forward.

DIAGONAL ARCHETYPE AXIS

Preset aesthetic core assortments. The exact center cell is the Primary Archetype. Supporting directions radiate outward.

Archetype assignment happens after the 32-feature root layer is populated. The archetype then informs fashion direction, material fingerprints, and prompt styling without altering the underlying measurements.

PROMPT LAYERS — LEVEL 0 vs LEVEL 1

Level 1 blocks become the base scene prompt. Once the scene is blocked in with these anchors, lighter recall versions (300 chars or combined 500-char blocks) can be used for continuation without losing identity.

WORKFLOW — HOW TO USE THIS ENGINE

This workflow is now the standard operating procedure for all FGE character intake. It is designed to be fast, repeatable, and canon-safe.

VALUE COMPOUNDING & RELEASE AUTHORITY

This document and its companion spreadsheet constitute the single legal customization engine for FGE Level Zero character builds. It is now locked. Future evolution will occur through controlled expansion of the archetype axis and refinement of the weighted reduction rules only. The 32-feature root layer remains immutable.
