

OPENING DOCTRINE

DRAGON RATIO

1:3 Honest · 1:7 Mastery

YOU START AT EMBERLING · EVERYTHING AFTER IS CALIBRATION

◆ CORE STATEMENT

The 1:3 ratio is not user failure. *It is Emberling running calibration cycles.* One useful output for every three actions is the honest baseline of creative system work. The system requires three honest actions to learn your fingerprint before it can stabilize. The ratio is the ignition sequence, not a scorecard. The purpose of this manual is to move your ratio from 1:3 to 1:7 — not by eliminating failure, but by making each failure more precise and more legible.

◆ THE RATIO VISUALIZED

HONEST BASELINE

1 : 3

Emberling calibration

MASTERY WINDOW

1 : 7

Dragons govern with you

◆ DRAGON STATE READING

When *narrative_gravity* stabilizes and *tension_index* settles into a consistent range, you have entered the 1:7 mastery window. The dragons are no longer calibrating your fingerprint — they are governing with you instead of for you. This shift is legible in the state readings before it is legible in the output quality.

I WIN : 3 ACTIONS → EMBERLING CALIBRATION IN PROGRESS

DRAGONS LEARNING FINGERPRINT · DO NOT OPTIMIZE · ONLY LOG

NARRATIVE_GRAVITY STABLE + TENSION_INDEX SETTLED → 1:7 WINDOW
MASTERY SIGNAL: DRAGONS NOW GOVERN WITH YOU · RATIO NATURALLY
LENGTHENS

◆ EXECUTABLE PRACTICE

Track your personal ratio for seven consecutive cycles.

Mark each action: W (win — usable output) or L (loss — not usable).

Do not optimize for wins. Optimize for clean delta logging. The ratio improves when the losses become more legible, not when you try harder to avoid them. Mastery arrives when the ratio naturally lengthens on its own.

- ☒ 7-cycle ratio tracking started
- ☐ Each action logged W or L — no judgment
- ☐ Current ratio calculated after cycle 3

- Dragon state read at end of each cycle

- Ratio lengthening observed — mastery window approaching
