

FGE TRANSLATION LAYER — ASSET MANIFEST v1.0

Modular Monetization & Product Fracture · Naming Convention + HD Compression Tiers

Scope: 51 files in project directory · **Status:** Every file classified · zero speculative entries

1 · THE NAMING CONVENTION

FGE-[DOMAIN]-[NNN]-[HD#]-v[X]__[slug].[ext]

Example:

FGE-CHR-002-HD2-v1__RavenVoss_GospelCard.html

Field	Meaning	Rule
DOMAIN	Which block of the engine owns it	One of 8 codes below
NNN	Asset lineage number	Sequential per domain. Character-bound assets reuse registry char numbers (Lilith=001, Raven=002)
HD#	Compression tier	HD1 / HD2 / HD3 — see §2
v[X]	Content version	Bumps on content change only. Existing internal versions preserved (Haptic Veil keeps v1.2, Film System keeps v2)
slug	Human-readable name	Optional but recommended; double underscore separates ID from slug
-a/-b suffix	Duplicate render of same asset at same tier	Pick one master, archive the rest

The sibling rule (this IS the translation layer): the same DOMAIN>NNN at different HD tiers are compression siblings of one asset. FGE-ENG-001-HD1 (registry.py) and FGE-ENG-001-HD2 (registry.pdf) are the first live example — same asset, two fidelities.

Domain codes (mapped to the Structural Review Sheet taxonomy)

Code	Block	Owns
CHR	Block A — Character Building	Anchors, gospel cards, forge architecture, character renders
NAR	Block B — Narrative Engine	Bloodlines, interaction engine, pipeline narrative
MAT	Block C — Material Universe	Kintsugi, Obsidian, Haptic Veil, material doctrine
PRD	Block D — Products & Cards	Lookbooks, artifact posters, vault, signature/authentication, film system
ENG	Hidden Engine	Code (registry/build/data), Cognitive System, Studio System
GOV	Governance	(No files in this directory yet — governance docs live elsewhere)
MTH	Method Layer	Review sheet, prompt-systems craft, +30 engine, roadmaps
BIZ	Business / Monetization	Execution plans, marketing system, leasing pipelines
REF	External reference	Non-canon. Never registered, never sold.

2 · HD COMPRESSION DOCTRINE (the inverse rule, formalized)

Low information → high compile. High information → low compile.

Tier	Name	Information Density	Compile	Commercial Role
HD1	Full Fidelity	High — complete spec, code, full doc	Low (kept near-raw)	Vault / paid. Flagship & module tier
HD2	Working Compile	Medium — system maps, diagrams, cards with structure	Medium	Product tier. Sellable standalone modules

HD3	High Compile	Low — single concept, one hook, one image	High (hard compressed)	Free surface. Marketing drops, Tier A content
------------	--------------	---	------------------------	--

The HD suffix is the payroll boundary. Nothing above HD3 ships free; nothing at HD1 ships outside a paid container.

3 • THE MANIFEST

Status flags follow registry doctrine: **CONFIRMED** (visually verified this pass) · **PROVISIONAL** (classified by filename, verify before rename) · **DUP-REVIEW** (sibling renders — pick a master) · **DEMO** · **NON-CANON**.

ENG — Hidden Engine (8 files)

New ID	Current Filename	Status	Notes
FGE-ENG-001-HD1-v1__Registry.py	registry.py	CONFIRMED	Canon catalog, code

4 • CARD-BUILD QUEUE (the compression work)

Every HD1 flagship needs an HD3 sibling — “the new card built to the same detail, compressed.” Template: the Anchor Method card (FGE-CHR-003), which is already the proven HD3 obsidian-collectible format. Priority order by commercial pull:

1. **FGE-CHR-004-HD3** — Character Forge card (front door to the Layers 0–8 product)
2. **FGE-NAR-002-HD3** — Interaction Engine card
3. **FGE-MAT-005-HD3** — Haptic Veil card
4. **FGE-ENG-005-HD3** — Cognitive System card
5. **FGE-PRD-007-HD3** — Artifact Film System card
6. **FGE-MTH-001-HD3** — One-card system summary of the Structural Review Sheet (the surfacing artifact)

5 • CLEANUP QUEUE

- Resolve 5 DUP-REVIEW pairs/sets (Lang Graf x2, Build Your Craft x4, Obsidian x2, Grok+30 x2, Leasable Personality x2) — pick masters, archive rest
- Verify 11 PROVISIONAL classifications visually before applying renames
- Decide canon status of Aric Valen demo (CHR-005)

- GOV domain is empty in this directory — pull governance doctrine files in or note their location

Manifest doctrine mirrors registry.py: only real files registered, nothing speculative. v1.0
