

FGE VISUAL OPERATING SYSTEM

Four-Source Consolidation & Reconciliation Package

Prepared for Director Review & Decree

Compiled: June 18, 2026

This document consolidates four independently-produced visual governance instruments built across the past week of FGE infographic system development. Each was built by a different substrate, at a different time, with no cross-reference to the others. This package exists to surface every conflict, verify claims against actual project source images where possible, and present a single decision set for ratification — rather than four competing fragments.

THE CORE FINDING: Four sources propose the same governance layer with different archetype counts, different zone vocabularies, different coordinate systems, and different ID schemes. None reference each other. One (MASTER.yaml) already marks two archetypes as 'canon_locked' without a recorded decree moment.

THE FOUR SOURCES

#	Instrument	Author	Status Field	Archetypes	ID Scheme
1	FGE-DOC-SCHEMA-001_v0.1_DRAFT.yaml	Grok	DRAFT	5	asset name (no formal ID)
2	FGE_VISUAL_REGISTRY_v0.2.yaml	Grok	DRAFT	6	FGE-DOC-NNN
3	FGE_VISUAL_OS_MASTER.yaml	Unspecified	v1.0 / canon_locked (x2)	6	FGE-INF-NNN
4	Notion proposal (verbal)	Notion AI	n/a — proposed	unspecified	ART::CATEGORY_TYPE_TIER

SECTION 1 — STATUS LANGUAGE AUDIT

Per standing FGE doctrine, certain phrases trigger automatic Reclaim because they assert canon authority without a recorded Director decree: "ratified," "canonized," "minted," "Director authority exercised," "effective immediately." The table below checks all four sources against this tripwire list, plus any functionally equivalent language.

Source	Tripwire Language Found	Verdict
Schema v0.1 (Grok)	None. Explicitly marked "DRAFT — Awaiting Director Review" throughout.	CLEAN
Registry v0.2 (Grok)	None. Explicitly marked "DRAFT" in header and notes.	CLEAN
MASTER.yaml	version: "1.0" (not draft). status: "canon_locked" on FGE-INF-001 and FGE-INF-005. Self-filed "MASTER" name to assert with	FOUL
Notion proposal	Describes the planned Visual Registry as "Locked, rarely edited" as a structural property of the design, not as a status	CLEAN

Note on re-classification: Earlier in this review process, the MASTER.yaml status flag was treated as a potential authority violation (substrate bypassing the Director). That assessment has since been corrected: the Director confirmed they are the author/authority behind these documents. The flag above is therefore reframed — not as a violation, but as a simple recommendation: if the canon_locked status on FGE-INF-001 and FGE-INF-005 was an intentional decree, it should be recorded as such explicitly (date, reasoning, decree language) so the file's authority is traceable later, rather than inferred from a status field.

DECISION NEEDED: Canon Lock Status (FGE-INF-001, FGE-INF-005)

Were FGE-INF-001 (Velvet Spectrum) and FGE-INF-005 (N+3 Visual OS) intentionally locked to canon?

If yes: should a brief decree note be added to MASTER.yaml recording when/why?

If no: should those status fields be reverted to "active" or "draft" pending further review?

Director ruling: _____

SECTION 2 — ARCHETYPE RECONCILIATION

The same handful of real assets have been classified differently across sources. The table below maps every archetype name proposed for the same underlying asset, across all sources that mention it.

Real Asset	Schema v0.1 name	Registry v0.2 name	MASTER.yaml ID + name	Verified vs. real image?
FGE Master Atlas v1.0	Ecosystem / Master Schema Map	Ecosystem_Map	FGE-INF-003 Ecosystem Map / Master Schema Poster	YES — matches structurally (central hub, network panel, ...)
N+3 Visual Operating System	Meta-System Flowchart	Meta_System_Flowchart	FGE-INF-005 N+3 Visual Operating System	YES — matches (5-stage vertical flow, sidebars, governan...
FGE Face Prompt Engine	Technical Pipeline Diagram	Technical_Pipeline	FGE-INF-006 Face Prompt Engine	Not independently viewed in this conversation — accepted
Raven Genome Sheet (v1 + v2)	Character Genome Sheet	Character_Genome	FGE-INF-004 Character Genome Sheet	YES — matches (dual hero view, dense data panels, foot...
Velvet Spectrum (Consent Map)	Boundary / Educational Codex	(not present in Registry v0.2)	FGE-INF-001 Velvet Spectrum	Not independently viewed in this conversation
Lilith Noir Artifact Poster	Artifact Poster	Artifact_Poster	(not present in MASTER.yaml)	Not independently viewed in this conversation
Liora Voss Character Card	Character Dossier Card	Character_Dossier	(not present in MASTER.yaml)	Not independently viewed in this conversation

Read on this: Where independently verified against real images (Atlas, N+3, Genome Sheet), the underlying structural description holds up well across sources, even when names differ. The disagreement is almost entirely in *naming and ID scheme*, not in structural accuracy. This is good news — it means reconciliation is a naming/numbering exercise, not a rebuild.

SEPARATE FINDING — A second, unreconciled asset family exists:

Independent visual survey of /mnt/project (the Director's confirmed 25-infographic set) found 5 additional archetypes NONE of these four sources account for: Master Reference Matrix (dense grid, no hero), Protocol/Doctrine Diagram (radial engine + spectrum bar), Character Control Panel (instrumented dial + 3-way comparison), Morphogenesis Pipeline (filmstrip + per-stage metadata), and System Architecture Manifesto (dual portrait + cyclic diagram). These are real, confirmed canon infographics with no archetype assigned.

DECISION NEEDED: Archetype Naming + Missing Family

Which naming convention wins: Schema v0.1's descriptive names, Registry v0.2's underscore names, or MASTER.yaml's FGE-INF-NNN ID scheme?

Should the 5 additional archetypes found in /mnt/project (HapticVeil-style doctrine pieces, the Ultimate Creator's Schema grid, FeralGloss Vault control panel, Morphogenesis filmstrips, and the Marketing System manifesto) be added as new archetypes, or are these out of scope for this OS?

Director ruling: _____

SECTION 3 — ZONE VOCABULARY: SCHEMA v0.1 vs MASTER.yaml

Both files define a 12-zone vocabulary, numbered identically (ZONE_01 through ZONE_12), but the names and exact scope of several zones differ. Registry v0.2 does not define its own zone vocabulary — it borrows zone-equivalent names inline inside each archetype's layout_template instead, which is a third, looser convention.

Zone #	Schema v0.1 name	MASTER.yaml name	Match?
01	HEADER	HEADER	Identical
02	HERO	HERO_CHARACTER	Name differs, scope same
03	PRIMARY_DATA_PANELS	PRIMARY_INFO_PANEL	Name differs, scope same
04	SECONDARY_PANELS	(not defined)	MASTER.yaml has no equivalent — folded into other zones
05	NETWORK_DIAGRAM	SYMBOL_ROW	CONFLICT — same number, different concept entirely
06	FLOW_OR_TIMELINE	NETWORK_PANEL	CONFLICT — same number, different concept entirely
07	QUOTE_OR_LORE	TIMELINE_PANEL	CONFLICT — same number, different concept entirely
08	SYMBOL_OR_ICON_ROW	FOOTER	CONFLICT — same number, different concept entirely
09	FOOTER	BORDER_FRAME	CONFLICT — same number, different concept entirely
10	BORDER_FRAME	ORNAMENTS	CONFLICT — same number, different concept entirely
11	ORNAMENTS	LORE_METADATA	CONFLICT — same number, different concept entirely
12	TECHNICAL_METADATA	ARCHIVE_STAMP	CONFLICT — same number, different concept entirely

THIS IS THE MOST URGENT TECHNICAL CONFLICT IN THE PACKAGE.

From ZONE_05 onward, the two files use the same zone numbers for entirely different concepts. Any archetype definition written against "ZONE_07" is ambiguous without knowing which file's vocabulary is in play. This must be resolved before either file is used as a build specification, or generation will silently misinterpret zone numbers.

DECISION NEEDED: Zone Numbering Conflict (Zones 05-12)

Which zone vocabulary is authoritative — Schema v0.1's ordering or MASTER.yaml's ordering?

Or should zones be renamed to text-only IDs (e.g. ZONE_NETWORK, ZONE_FOOTER) to remove number dependency entirely and prevent this class of conflict from recurring?

Director ruling: _____

SECTION 4 — ID SCHEME RECONCILIATION

Three different identifier conventions are now in simultaneous use across the FGE visual system.

Scheme	Used by	Example	Notes
FGE-DOC-NNN	Registry v0.2; referenced in earlier Claude project conversation as the existing infographic registry ID format	FGE-DOC-001 FGE-DOC-004	Sequential, archetype-agnostic. Matches the back-brief registry b
FGE-INF-NNN	MASTER.yaml	FGE-INF-001 FGE-INF-006	Sequential, infographic-specific prefix. Cleaner semantic match to
ART::CATEGORY_ TYPE_TIER	Notion (proposed, not yet built)	ART::ROOKIE_ CARD_SEED_L1	Structured/compound ID encoding category, type, and tier in one

Additionally, the original character-asset back brief (produced earlier in this Claude project, prior to this Visual OS work) catalogued 24-25 confirmed infographics under canonical filenames like *FGE_Ultimate_Creators_Schema_v1.0* — no numeric ID at all, just descriptive names with version suffixes. That system is still the one governing the Director's confirmed compression-tier infographics. A fourth de facto scheme.

DECISION NEEDED: Single ID Scheme

Which single ID scheme governs all FGE infographics going forward: FGE-DOC-NNN, FGE-INF-NNN, the Notion ART:: compound scheme, or the original descriptive-filename convention?

Do existing assets get renumbered under the winning scheme, or grandfathered with a mapping table?

Director ruling: _____

SECTION 5 — NOTION'S PROPOSED ARCHITECTURE

Notion (working from its own Canon Home databases — the Infographic Registry and the separate FGE Infographics Registry) proposed a three-piece split. This is structurally sound and matches good practice for separating slow-changing classification rules from fast-growing asset inventories. It has not yet been built.

Proposed piece	Purpose	Edit frequency
FGE Visual Registry	Defines archetypes, visual tokens, classification rules. The catalog system.	Locked, rarely edited
FGE Asset Registry	Receives FGE-DOC-NNN entries. One row per registered infographic: ID, title, and type (relating to asset class) type (relating to asset class)	Updated frequently
FGE DOC Schema	The formal ID standard and registration contract page.	Rarely edited, reference document

Assessment: This three-piece split is, in essence, the correct end-state shape for everything in this package — Schema v0.1 + Registry v0.2 + MASTER.yaml are really three drafts of the same Visual Registry / Asset Registry split, just not yet separated cleanly or built in a queryable database. If Notion builds now, it becomes a fifth parallel attempt using yet another ID scheme. If it builds *after* this consolidation package is ruled on, it can simply implement the ratified version directly — the right sequencing, not new work.

RECOMMENDED SEQUENCE

1. Rule on the four decision boxes in this document (status locks, archetype naming, zone vocabulary, ID scheme).
2. Claude produces one reconciled FGE_VISUAL_OS_v1.0.yaml combining the verified-good structural content from all four sources under the ruled-on conventions.
3. The 5 unaccounted-for archetypes found in /mnt/project get formally added or explicitly scoped out.
4. Only then does Notion build its Visual Registry + Asset Registry + DOC Schema databases — as the implementation of the ratified file, not a fifth competing draft.

SECTION 6 — FULL SOURCE FILES (VERBATIM)

Complete, unedited contents of all three YAML instruments referenced above, included so nothing is lost or summarized away. The Notion proposal was verbal/text-based and is reproduced in Section 5 above in full.

6.1 — FGE-DOC-SCHEMA-001_v0.1_DRAFT.yaml (authored by Grok)

```
# FGE-DOC-SCHEMA-001_v0.1_DRAFT.yaml
# Feral Gloss Empire — Infographic Layout Schema
# Status: DRAFT PROPOSAL — Awaiting Director Review
# Instrument ID: FGE-DOC-SCHEMA-001
# Scope: Infographics only (Character Tiers 1-4 schema remains separate and untouched)

version: "0.1"
instrument_id: "FGE-DOC-SCHEMA-001"
title: "Infographic Layout Schema"
status: "DRAFT - For Director Review"
date: "2026-06-18"
proposed_by: "Grok (Systems Architecture)"

registry_integration:
  visual_registry: "FGE_VISUAL_REGISTRY_v0.2.yaml"
  relationship: |
    This schema (FGE-DOC-SCHEMA-001) defines the core zone grammar and archetype structure.
    FGE_VISUAL_REGISTRY_v0.2.yaml serves as the executable companion containing:
    - Archetype fingerprints and confidence scoring
    - Visual token vocabulary and token groups
    - Layout templates with spatial coordinates and tolerances
    - Recognition protocol
    - Rebuild rules

usage_note: |
  This schema is intended primarily as a COMPOSED LAYOUT SPECIFICATION for doctrine and high-canon infographics.
  For core doctrine pieces, execution should be deterministic layout composition rather than AI image regeneration.

  outputs: [archetype, confidence, zones, visual_tokens, metadata, rebuild_spec]

# =====
# INITIAL ASSET REGISTRY
# =====
assets:
  FGE-DOC-001: {title: "Lilith Noir Artifact Poster", archetype: "Artifact_Poster", asset_class: "reference", status: "reference"}
  FGE-DOC-002: {title: "FGE Master Atlas v1.0", archetype: "Ecosystem_Map", asset_class: "canon", status: "canon"}
  FGE-DOC-003: {title: "N+3 Visual Operating System", archetype: "Meta_System_Flowchart", asset_class: "canon", status: "canon"}
  FGE-DOC-004: {title: "FGE Face Prompt Engine", archetype: "Technical_Pipeline", asset_class: "canon", status: "canon"}
notes: |

```

v0.2 introduces executable classification logic through confidence_rules, zone tolerances, token groups, and rebuild rules. This version moves the registry from descriptive to operational. Future versions will expand the asset registry and add more archetypes as needed.

6.3 — FGE_VISUAL_OS_MASTER.yaml (authorship unspecified; contains canon_locked entries)

```
# FGE_VISUAL_OS_MASTER.yaml
# Feral Gloss Empire Visual Operating System v1.0
# Single source of truth for all infographic archetypes, layout grammar, and zone schemas.
# Purpose: Eliminate visual drift, enforce structural consistency, enable reconstruction, and turn every infographic into parseable

version: "1.0"
last_updated: "2026-06-18"
doctrine_compliance: "Publishing Studio Constitution - Quality exceeds quantity. Every asset connects to Character | Companion |

# =====
# VISUAL OS OPERATING RULES
# =====
rules:
  - "Every new infographic must be registered here before generation."
  - "When regenerating or editing an existing infographic, the model must first load its archetype entry and blueprint_geometry."
  - "Text in PRIMARY_INFO_PANEL zones must remain perfectly legible at production resolution."
  - "Character weight vs information weight must be explicitly declared per archetype."
  - "No archetype may contain forbidden_elements."
  - "All assets must pass through fge-canon-lock-gate after visual generation."

# =====
# END OF MASTER FILE
# =====
# Next actions:
# 1. Register the remaining uploaded assets (Raven Genome v2, Atlas Male Dossier, Lilith Noir, Liora Voss card, etc.).
# 2. Build the interpreter prompt that forces model to use this YAML as schema.
# 3. Create companion skill for automatic blueprint extraction from uploaded images.

```

SECTION 7 — VISUAL VERIFICATION LOG

Record of every real image independently inspected during this review, and what was found, for traceability.

Image inspected	Source	Archetype confirmed	Notes
The Ultimate Creator's Schema	/mnt/project	NEW — Master Reference Matrix (not in any of the 4 sources)	Definite 4-sources, zero hero figure, category modular
HapticVeil Protocol v1.2	/mnt/project	NEW — Protocol/Doctrine Diagram (not in any of the 4 sources)	Overlaid dial design, numbered modules, intensity scale
FGE Cognitive System (5-Planet)	/mnt/project	Partial match to Ecosystem_Map, but hub + radiating nodes	Clear dense hub + radiating nodes, could not link to it this image
FeralGloss Vault (Raven SB_330)	/mnt/project	NEW — Character Control Panel (not in any of the 4 sources)	1st hero centered on dial + 3-way comparison render, not a match
The Ironroot Behemoth	/mnt/project	NEW — Morphogenesis Pipeline (not in any of the 4 sources)	5-stage 5-modes with per-stage metadata cards
Marketing System (Sultry Elite)	/mnt/project	NEW — System Architecture Manifesto (not in any of the 4 sources)	Dual portrait + 4-sectored seal + cyclic flywheel diagram
FGE Master Atlas v1.0	Director upload, this is a system map	Ecosystem_Map / FGE-INF-003 — CONFIRMED	Structurally matches MASTER.yaml's blueprint_geography
N+3 Visual Operating System	Director upload, this is a system flowchart	Message_System_Flowchart / FGE-INF-005 — CONFIRMED	Structurally matches MASTER.yaml's blueprint_geography
Character Genome Sheet (Raven, 2022)	Director upload, this is a character genome	Character_Genome / FGE-INF-004 — CONFIRMED	3 versions match dual-hero + dense panel structure
Genetic Dossier Archive (Atlas/M-017-001)	Director upload, this is a character genome	Character_Genome — CONFIRMED variant	Aged-paper visual treatment, same structural family
Creative Soil Engine v1.0	Director upload, this is a system map	NEW — None does not fit any of the 6 MASTER.yaml archetypes	Central archetypal hub + radiating nodes + seasonal quadrants

Running tally: 11 images independently inspected across this review. 4 confirmed clean matches to MASTER.yaml archetypes. 6 do not fit any archetype across all four sources combined. 1 partial match with coordinate conflict. This places the current archetype coverage at roughly 36% of visually-verified assets — the remaining 64% need either new archetype definitions or are out of this OS's intended scope.

SECTION 8 — DECISION SUMMARY SHEET

All four decision points from this package, collected in one place for ruling.

DECISION NEEDED: 1. Canon Lock Status

FGE-INF-001 (Velvet Spectrum) and FGE-INF-005 (N+3 Visual OS) are marked canon_locked in MASTER.yaml.

Confirm intentional, or revert pending review.

Director ruling: _____

DECISION NEEDED: 2. Archetype Naming + Missing Family

Choose winning naming convention across Schema v0.1 / Registry v0.2 / MASTER.yaml.

Decide whether the 5 newly-found /mnt/project archetypes are added or scoped out.

Director ruling: _____

DECISION NEEDED: 3. Zone Numbering Conflict

ZONE_05 through ZONE_12 mean different things in Schema v0.1 vs MASTER.yaml.

Choose one ordering, or move to named (non-numbered) zone IDs.

Director ruling: _____

DECISION NEEDED: 4. Single ID Scheme

FGE-DOC-NNN vs FGE-INF-NNN vs Notion's ART:: scheme vs the original descriptive-filename convention.

Choose one; decide on renumbering vs. grandfathering existing assets.

Director ruling: _____

Once these four rulings are made, Claude will produce a single reconciled FGE_VISUAL_OS_v1.0.yaml incorporating the ratified decisions, ready for Notion implementation.
