PILOT ARCHETYPE 3 — Material Study	12
Open Questions for Director Ratification	13

FGE Infographic Tier Map — v0.1 (DRAFT)

Pre-work audit per FGE Infographic Compression Brief v1.0, Part 2. Status: Claude's first-pass visual triage. Needs Keith's confirmation/correction before any compression begins (Hard Rule: "Never compress without it").

0. Scope Reality Check

The archive contains **58 files**, not ~30. After removing exact/near duplicates and non-FGE content, there are ~**51 unique FGE assets**. The brief's "30 infographics" appears to describe the **canon-doctrine / system-diagram subset**; the archive also contains character profile cards, the Morphogenesis Pipeline creature series, and material-study photography (Pearl/Obsidian). All are tiered below, but see **Section 4** for a scope question on the photography-heavy pieces.

Current resolution status (confirms the known blocker): - Native widths range 784–2560px. - Only **3 files** currently meet the Primary 1800px floor: IMG_010044_0.jpg (2560×3840), ai_repair_...JPEG (1920×3413), IMG_7177.JPG (2048×3072). - Everything else (the vast majority of proposed Primary tier) sits at 1024×1536 / 1536×1024 / 1149×1369 / 1254×1254 — **below the Primary floor and most below even the Secondary floor's upper end.**

1. PRIMARY Tier — Canon Doctrine & Core Systems

(Target: 1800–2200px wide, 450–650KB, JPEG 82+/lossless WebP)

#	Original Filename	Working Title	Override Reason
01	050C84F8-9453-47A0-9427-CEA4C72DCFF8.PNG	Opening Doctrine — Four Foundations of the FGE Material Universe	Canon doctrine
02	04F9CBA7-B3F5-40DA-B5BD-17D6EC368252.PNG	Siren Logic — Four Gates of Siren Classification	Canon doctrine
03	2D25D25B-C088-48EC-804C-2163BFD96B50.PNG	FGE Reversal Engine v1.0 — 2000 Data Point Synchronicity Schema	Hero + critical technical (Material Poetics Registry incl. Obsidian/Pearl/Kintsugi; Haptic Veil/Anchor/Siren systems)
04	35DA4F3E-7009-419C-BF1C-B771151BE43C.PNG	The Relationship Operating System (ROS)	Canon operational doctrine
05	8D52B1A7-B0D0-4CC3-B0B6-CC201BDED62A.PNG	Feral Gloss Engine — Character Asset Compiler (CAC) Data Flow Map	Canon system architecture

#	Original Filename	Working Title	Override Reason
06	IMG_010044_0.jpg	The Feral Gloss Equation — $V=(F \cdot G) \times P^n$, Pillar Zero Scoring Rubric	Hero + critical technical; canon doctrine. Master for this content (2560×3840 — already exceeds Primary floor)
07	6228A185-3EAF-4409-9BE7-BB141482C69E.PNG	Feral Gloss Empire — Production Pipeline	Canon operational doctrine
08	84CACA64-6C83-4DDE-BC76-7B7C81A496A9.PNG	Feral Gloss Empire — Character Foundry	Canon operational doctrine
09	FFA34A94-B4B4-4AE3-AB3C-CDE41EB57E65.PNG	Haptic Veil Protocol v1.2	Automatic override rule (Haptic Veil)
10	IMG_8120 2.JPG	Shadowborn — Haptic Veil Gift Distribution v1.0	Automatic override rule (Haptic Veil)
11	B1680BA1-2503-4CBF-B161-55AE0CBB0700.PNG	FGE Character Forge	Canon system
12	FFA38855-0FE1-4745-92AF-F90375C35BAB 3.PNG	Character Design I — LangGraph Architecture	Automatic override rule (LangGraph) — □ light/cream background
13	ai_repair_20260603112648582.jpg	48582 Impact Engine v1.0	Canon system. Already ≥1800px wide
14	F1D3FB1C-8B9B-4D96-886A-1D1AAF2583A2 2.PNG	FGE Cognitive System — 5-Planet Ecosystem	Canon system architecture

22	THE IRONROOT BEHEMOTH.JPG	Morphogenesis Pipeline — Ironroot Behemoth	Morphogenesis series instance
23	OBSIDIAN BEAUTY FORGED IN VIOLENCE. SHARPNESS BY DESIGN..PNG	Morphogenesis Pipeline — Liora Vale (Obsidian Beauty)	Morphogenesis series instance + Obsidian material

Secondary count: 23

3. EXCLUDE — Duplicates & Out-of-Scope

Original Filename	Reason
BUILD YOUR CRAFT_THE NEXT MOVE2.PNG	Exact duplicate (pixel-identical) of “BUILD YOUR CRAFT the next move.PNG”
IMG_6018.JPG	Lower-res JPEG re-export of the same “Build Your Craft” piece
IMG_8301.JPG	Lower-res duplicate of IMG_010044_0.jpg (Feral Gloss Equation)
IMG_6232.JPG	Near-duplicate of E58537D3 (Morphogenesis overview) — retain in /masters/ as upscale reference only, not a separate registry entry
D2282F34-5EF9-451F-985B-89350A6B2978.PNG	“Gemma Models for iOS” comparative table — not FGE content
IMG_8367.heic	“Evolution of RAG” screenshot — not FGE content
IMG_8369.heic	Shutterstock pose-pack reference screenshot — not FGE content

No Tertiary tier candidates were identified. Every FGE-branded asset in this archive carries canon or material weight at Secondary or above. This is itself a finding — see Section 4, Q1.

4. Open Questions / Decisions Needed Before Compression Begins

Q1 — Primary tier has 28 pieces, Secondary has 23, Tertiary has 0. This inverts the brief's hierarchy assumption (Primary = small dominant set, Tertiary = bulk supporting material). Two ways to resolve: - (a) Re-scope "Primary" to mean *display-dominant set* (re-audit down to ~8-10 true flagship pieces — doctrine covers + hero equations), demote the rest of the "canon system" pieces to Secondary, and let the Morphogenesis/face-analysis/material-study series occupy Secondary→Tertiary. - (b) Keep the canon-override logic as-is, but add a **fourth internal tier ("Primary-A" vs "Primary-B")** so the *set-level* hierarchy still reads correctly even though all 28 nominally pass the Primary bar.

Q2 — Morphogenesis Pipeline series (8 creature cards). Each contains a hero visual + dominance-slider lattice (fine technical detail), which technically triggers the Primary override on its own. Recommendation: only the series **overview** piece (#28 above) is Primary; individual creature cards are Secondary. Confirm or override.

Q3 — Resolution blocker (the open item from the last session). 27 of 28 proposed Primary pieces are at 1024-1536px, below the 1800px floor. Options: - Regenerate at 2x via Grok (highest fidelity, slowest) - AI upscale via Real-ESRGAN (can be run in this environment — I can pilot it on 1-2 pieces to gauge quality before committing to all 28) - Proceed at current resolution for now, ship at 1024-1536px, and flag Primary tier as "resolution-pending" in the registry

Q4 — Light-background pieces (5 found) need the dark-mode inversion pass anticipated in the brief's n+3 section: Character Design I (LangGraph), From Character Data to a Leasable Personality, The Kintsugi Effect, The Pearl, The Layers of AI.

5. Proposed Naming Convention (pending tier confirmation)

```
primary-01-opening-doctrine-four-foundations.png
primary-02-siren-logic-four-gates.png
primary-03-fge-reversal-engine-v1.png
...
secondary-01-blackrock-material-study.png
secondary-02-the-pearl-material-study.png
...
```

Sequence numbers will be finalized once Q1/Q2 are resolved, to avoid renumbering churn. -e

FGE Visual OS — v0.1 (PILOT / PROPOSAL — NOT CANON)

Drafted by Claude per Director request. This is a proposal for ratification, not a decree. Scoped to 3 archetypes for evaluation before extending to the full 40+ infographic library.

Purpose

Right now each infographic is generated as a finished artifact with no machine-readable record of *which elements are decorative, which are data, which are mandatory, which are optional, and which define identity*. This causes generation drift across passes and substrates.

This document proposes a schema layer — zones + layout grammar + visual language tags — attached to each infographic **archetype** (not each individual piece). One archetype definition serves every infographic that shares its structure.

Naming Convention Alignment

The character schema (FGE-TMPL-CHAR-001) already established a working pattern: version + provenance fields on every output, Tiers 1-4 as rendered views, per-field disclosure flags. This document reuses that pattern rather than inventing a second vocabulary, so the two systems stay legible to each other.

Every archetype entry carries: - id — FGE-VOS-### (Visual OS registry number, separate sequence from character schema) - version — independent versioning, same convention as character schema - provenance — which infographic(s) the archetype was derived from - disclosure_default — customer-facing / licensee-only / internal-canon (archetype-level default; does not override existing per-field character schema flags where the two overlap, e.g. a character dossier archetype)

Open naming question for the Director: should Visual OS archetype IDs live in the *same* registry sequence as character schema templates, or stay a separate FGE-VOS-### track? Recommend separate track since archetypes describe layout, not character canon — but flagging for ratification rather than assuming.

Zone Vocabulary — Revised from Initial Proposal

The original 12-zone list was inferred from a single example. Testing it against three structurally different archetypes (below) surfaced a needed addition: **not all zones are rectilinear**. Kintsugi gold seams and fracture lines are deliberately organic — forcing them into a grid box fights the aesthetic. Each zone now carries a shape field:

- shape: rect — standard x/y/w/h grid zone (percentages of canvas)
 - shape: organic — bounded region only, no fixed geometry; described by adjacency/anchor instead of coordinates
-

PILOT ARCHETYPE 1 — Character Dossier

```
id: FGE-VOS-001
title: Character Dossier
version: 0.1
```

provenance: "Aric Valen – The Oathbound" (reference piece)

disclosure_default: licensee-only

purpose: >

Single-character profile card combining portrait, identity data, narrative attributes, and quick-reference stats. Maps to Character Schema Tiers 1-3 as rendered output.

zones:

header:

shape: rect

```

PILOT ARCHETYPE 2 — Canon System Diagram (Hero + Technical Panels)

```

id: FGE-VOS-002
title: Canon System Diagram — Hero Composite
version: 0.1
provenance: "Project Lang Graf — Full Recursive Expansion" (reference piece)
disclosure_default: internal-canon

purpose: >
  Full-body hero character flanked by symmetrical technical/doctrine
  panels. Used for canon system documentation where the character
  IS the system's visual anchor (e.g. Lang Graf, Anchor Method,
  Kintsugi Interface explainers). Triggers Primary-tier override
  per Compression Brief Part 2 — hero visual + critical technical
  info present simultaneously.

zones:
  title_block:
    shape: rect
    x: 0
    y: 0
    w: 100
    h: 6
    contains: [system_name, subtitle, status_line]

```

```

hero_center:
  shape: rect
  x: 25
  y: 6

  w: 25
  h: 86
  contains: [identity_panels, data_stack_panels, sop_panels]
synthesis_footer:
  shape: rect
  x: 0
  y: 92
  w: 100
  h: 8
  contains: [summary_statement, status_tagline]
gold_seam_overlay:
  shape: organic
  anchor: hero_center
  contains: [kintsugi_lines, fracture_details]

visual_language:
  frame: obsidian_black_gold_trim
  panel_material: dark_glass_bordered_gold
  typography: luxury_serif_titles / fine_sans_data
  lighting: cinematic_tenebrism
  particles: gold_embers_optional
  density: very_high

required_elements: [hero_center, left_panel_stack, right_panel_stack, title_block]
optional_elements: [gold_seam_overlay, synthesis_footer]
forbidden_elements: [empty_panels, placeholder_text, off-canon_material_signatures]

tier_override_note: >
  Per Compression Brief automatic override rules, any infographic
  matching this archetype defaults to Primary tier regardless of
  file size, since it combines hero visual + critical technical
  information by definition.

```

PILOT ARCHETYPE 3 — Material Study

```
id: FGE-VOS-003
title: Material Study
version: 0.1
provenance: "The Pearl" / "Blackrock" (reference pieces)
disclosure_default: customer-facing

purpose: >
  Single-material deep dive (Obsidian, Pearl, Kintsugi, Fracture).
  Documents a Critical-priority DNA element per the Compression
  Brief's Protection Matrix. Never falls below Secondary tier
  unless purely decorative.

zones:
  title_block:
    shape: rect
    x: 0
    y: 0

  density: low_to_medium

required_elements: [material_hero, property_list, title_block]
optional_elements: [layer_breakdown, footer_note]
forbidden_elements: [competing_material_signatures_in_same_frame, muddy_gold_rendering]

compression_note: >
  Material studies with light/parchment backgrounds (e.g. The
  Pearl) are flagged for the dark-mode inversion pass per
  Compression Brief Part 9, independent of tier assignment.
```

Open Questions for Director Ratification

1. **Registry placement** — does FGE-VOS-### live as its own doctrine track, or fold into FGE-TMPL-CHAR-001's numbering?
2. **Zone taxonomy coverage** — these 3 archetypes don't yet cover: pure data/comparison tables (e.g. Face Prompt Engine), the Morphogenesis creature-card format, or roadmap/timeline pieces (N+ Progression). Expand pilot to 2 more archetypes before going wide, or proceed with these 3 as proof-of-concept and backfill?
3. **Relationship to compression pipeline** — should tier overrides (Primary/Secondary/Tertiary) be *derived* from Visual OS archetype tags going forward, so tiering and schema stay in sync automatically? This would mean every future infographic gets its tier assigned at archetype-classification time, not as a separate audit step.
4. **shape: organic zones** — these have no coordinates by design. Confirm this is acceptable for machine parsing, or should organic zones get an approximate bounding region anyway for tooling purposes?

Nothing in this document is canon until confirmed. No existing infographic should be reclassified, retagged, or have generation re-run against this schema until ratified.
