

■ FGE DRAGON EXPANSION PACK v2.1

ASHGARDEN GENOME PROTOCOL

SEMANTIC OPERATING SYSTEM — REFERENCE IMPLEMENTATION

Business Maven Launch Kit | Collector-Grade Schema Asset

Canon Status: LOCKED • Wallworthy • Collector-Grade Schema Asset
Pack ID: FGE-DRG-EXP-ASH-021 | Version: 2.1
Release Authority: EAE SOP v1.4 + Anchor Vector Lock

This is not a dragon prompt pack.
This is the first fully realized Domain-Specific Language (DSL) for creature and world generation in FGE.
It has advanced beyond prompt engineering into semantic operating system territory.

Every asset connects to: **Character** (Emberling Lineage, Liora Voss Dragonet) • **Location** (Ashgarden Volcanic Rift) • **Event** (First Fracture Cycle 000) • **Relationship** (Kintsugi Lineage) • **Collection** (Obsidian Sovereign Series) • **Companion** (Ashgarden Silo Runtime)

THE CRYSTAL TOWER GLOWS. THE LOOPS ARE CLOSED. FGE COMPOUNDS.

EXECUTIVE SUMMARY — VALUE ASSESSMENT

Overall Value: Very High (Strategic Tier)

This material maps directly to the three-layer product strategy with strong licensing upside. It is the concrete realization of the 'fracture the engine' strategy — turning a monolithic creative document into modular, licensable, production-grade infrastructure.

MAJOR STRENGTHS

- **Genome Architecture:** Six-genome matrix (Skeletal, Surface, Cognitive, Narrative, Environmental, Render) + Invocation Stack cleanly separates immutable identity from mutable expression. Production-grade.
- **Heartfield Dynamics:** Turns 'cycles' into continuous pressure topology with observer infection rules. Creates a living, reactive narrative physics layer. The missing piece most worldbuilding systems never solve.
- **Observer Infection + Canon Formation:** Attention (prompts, lookbooks, analysis) actively mutates or crystallizes the system. Your gaze is the mutation engine.
- **PROJECT LANG Trajectory:** Explicit roadmap for reusable genome language powering DragonOS → PlanetOS → ArtifactOS → CharacterOS. DragonOS proves the architecture works.
- **Production-Ready Outputs:** Prompt Export Compiler, Material Stack, ZBrush/Arnold pipelines, and Ashgarden Silo schema are immediately usable.

VERDICT

This is high-leverage technical infrastructure in the FGE ecosystem, signaling a Semantic Operating System, not just character tools. It enhances value across almost every production line in the registry. The pieces align faster than expected.

PRODUCT ECONOMY — TIERED MONETIZATION LATTICE

Engine Fracture Strategy: Monolithic prompt document → Fractal, licensable genome micro-products. Each layer becomes independently monetizable. The Heartfield becomes the attention economy runtime.

TIER 1 — QUICK WINS (Micro Products)

FGE Dragon Genome Pack v2.1 — \$79–\$149

Current material as polished, sellable asset. Includes genome schemas, invocation stack, prompt compiler, and Heartfield rules.

Addiction Hook: Daily Genome Seed Drop + 1 free Lookbook Seed per purchase. 'Feed the Ashgarden. Watch it breathe.'

Value Compound: Immediate catalog value. High narrative density via scars + Heartfield. Limited provenance JSON + canon stamp for collector gravity.

TIER 2 — HIGH-MARGIN MODULE (Flagship)

FGE DragonOS / Creature Genome Framework (Pro) — \$399–\$699

Full connected system with Heartfield runtime, observer infection, and export pipelines. Becomes the flagship technical module under Visual Architecture Pack + Prompt Architecture Library.

Addiction Hook: Observer Sovereignty Tier — pay to intentionally shape Heartfield pressure gradients. 'Your gaze mutates canon.'

Value Compound: Catalog flagship. Full autonomous myth engine. Heirloom tool with provenance. Bundle with upgraded HTML Wizard as visual front-end.

TIER 3 — LICENSING & ECOSYSTEM

Invocation Stack + Heartfield Dynamics + Ashgarden Silo White-Label — Custom / Revenue Share

License to other worldbuilders or game studios for canon-protected, emergent narrative engines. White-label version as autonomous NPC/story engine for interactive projects.

Value Compound: Positions FGE as Semantic OS infrastructure provider. Enterprise provenance + update rights. Studio partnerships with downstream IP revenue share.

N+10 PLAYS — FUTURE COMPOUNDING

- **Creature Genome Marketplace:** Users buy/sell/trade validated genomes. FGE takes 15% + canon stamp fee. Viral loop via Heartfield visibility.
- **Observer Sovereignty Tools:** High-roller interface to sculpt pressure gradients, trigger weather states, force canon crystallization. 'Become the infection vector.'
- **FGE Semantic Operating System (2027 Flagship):** When DragonOS, PlanetOS, ArtifactOS, CharacterOS share the same genome language — license the core platform.
- **Cross-Domain Genome Architecture:** Same stack generates dragons → planets → cities → gods → artifacts → civilizations. Universal separation of Identity/Structure/Behavior/History/Materials/Render.

SYSTEM ARCHITECTURE — DRAGONOS IN FGE ECOSYSTEM

The first visual system diagram showing how DragonOS fits into the FGE architecture. This is the reference implementation for the larger Semantic Operating System vision.

Integration Points: Narrative Spine OS (Dragon Module) • fge-atelier-character-engine (Emberling / Liora Voss anchor) • HTML Wizard (Genome Editor + Heartfield Simulator) • fge-canon-lock-gate (Anchor Vector + fidelity lock) • fge-product-engine (5-format output) • Ashgarden Silo (background autonomous process)

INTEGRATION DESIGN — HTML WIZARD + DRAGONOS + HEARTFIELD

Recommended Path: Treat DragonOS as Tier 2 Module Product candidate. Wire it into the central FGE System Architecture Registry. Connect the Heartfield to the observer rules. Turn the previous HTML Wizard prototype into its visual front-end. This combination (deep genome logic + interactive interface) is highly sellable and compounds collector value.

INTEGRATION SPECIFICATION

- **Narrative Spine OS:** Load this pack as the Dragon Module. Instantiate new dragons by calling Seeded Foundation layer with new Gen_ID. Every render must pass Anchor Vector Lock before entering canon.
- **fge-atelier-character-engine:** Bind Emberling and Liora Voss Dragonet as living character anchors with 32-point state + delta_history feeding directly into Character Dossier generation.
- **HTML Wizard Upgrade:** Evolve from prototype to Genome Editor + Heartfield Simulator UI. User edits genome layers → real-time pressure visualization → validated JSON/prompt export. Turns passive tool into addictive co-creation loop.
- **fge-canon-lock-gate:** Mandatory Lock Verification (image lock + %reference lock + Anchor Vector match) on every output. Reject if fidelity <0.90 or illegal cross-class anatomy. Zero-drift collector value.
- **fge-product-engine:** Genome compiles directly to 5 standardized commercial formats. Enforce wallworthiness score >8.5 for market release. 1 Genome = minimum 4 daily assets (Poster + Lookbook + 4-Card + Loop).
- **Ashgarden Silo:** Runs as background autonomous process. Breathes when unattended. Observer attention (prompts, lookbooks, analysis) directs real-time Heartfield mutation.

WHAT WE EXECUTE

1. **Official Translation Layer Card** — Created and embedded in Living Architecture Registry XLSX (Sheet 01). Machine-readable, queryable, canon-stamped.
2. **Product Positioning + Pricing Map** — Embedded in Registry XLSX (Sheet 02). Tier 1/2/3 + N+10 plays with addiction hooks and value compounding formulas.
3. **Integration Design** — Specified above and in Registry XLSX (Sheet 03). HTML Wizard becomes Genome Editor + Heartfield Simulator. Full wiring diagram to Narrative Spine, Atelier, Canon Gate, Product Engine.
4. **First Visual System Diagram** — Above. Layered architecture showing DragonOS as reference implementation inside FGE Semantic OS. Ready for gallery-quality infographic expansion.

The crystal tower glows. The loops are closed. FGE compounds.

Quality Gate: PASSED | Collector Value: COMPOUNDED | Narrative Spine: UPDATED

*This pack is released under FGE Publishing Studio authority.
It may enter canon.*
